Providing Partner Support

Service above and beyond

Mission readiness

With a holistic approach, Boeing Government Services delivers steady, predictable readiness affordably. With maximized availability and minimized downtime, your teams will stay mission-ready.

We focus on:

- Supply chain solutions tailored for contested environments
- Proactive scheduled maintenance to enhance operational efficiency
- Responsiveness for planned and unplanned maintenance needs
- Intensive flight line training with advanced tools and virtual support from OEM experts for customer success

Deliver outcomes

Boeing Government Services delivers mission-capable assets and equips warfighters for success. We provide our government customers with outcomes-based capabilities that enable mission readiness.

- Parts when you need them, where you need them
- Aircraft modification – scheduled or rapid response – to support your mission
- Use of predictive and prescriptive analytics for optimized flight operations and increased warfighter readiness
- Turnkey training solutions, featuring advanced curriculum and simulation tools

readiness
you need
to prevail**

Families of platforms

Holistic approach to improve mission readiness

Performance-based logistics: Parts and material

Our approach offers performance-based logistics that supports flexible surge capacity to provide readiness and mission capability.

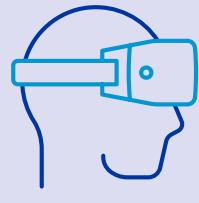

- Maintaining affordability and reducing downtime
- Using predictive analytics to maintain affordability and reduce downtime
- Shifting logistics responsibility to Boeing — aligning incentives while driving effectiveness
- Driving accountability to mission-aligned performance metrics

Complex modifications and MRO

We deliver complex modification services that enhance fleet performance, mission capability and life cycle value across a wide range of platforms.

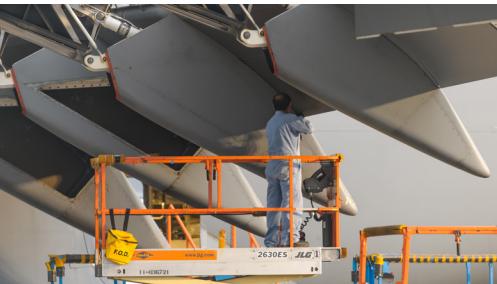

- Structural, avionics and mission system upgrades
- C4ISR integration and secure program handling
- Engineering, corrosion control and technical integration
- Proactivity for planned maintenance with responsiveness to unplanned maintenance

Training

We offer the essential hardware and software for effective training in virtual and augmented reality environments, as well as comprehensive curriculum solutions.

- Adaptive learning
- Integrated Live, Virtual & Constructive training
- Computer-based and classroom training
- Advanced modeling and simulation
- Flight simulation and aircrew training devices
